

MEDICINAL INGREDIENTS

Each 2.5ml serving contains:
Seal oil --- 2.5ml a source of
OMEGA 3 (DPA/EPA/DHA)

Vitamin A

Retinal Palmitate--875 IU
Beta Carotene ----375 IU

Vitamin D

(Cholecalciferol)---125 IU

Vitamin E

(Natural source)---31.5 IU

Recommended Dose for Dogs and Cats:

Up to 10 kg-----2.5 cc /day
10 to 20 kg-----5.0 cc/day
20 kg and up---10 cc/ day

Cautions and Warnings:

Excessive supplementation of
Vitamins A and D can have
negative effects. This formulation is
NOT intended for Human
Consumption.

FUR AND SKIN

Omega 3 Fatty Acids and Vitamin
A add luster and shine to your dog
and cats coat and eliminate dry
skin.

CARDIOVASCULAR

Evidence suggests Omega-3 fatty
acids may prevent certain cardiac
problems. High blood pressure has
been reduced in dogs
supplemented with fatty acids.

VISION

Omega-3 fatty acids and Vitamin
A are also essential for the
proper development and
maintenance of the retina and
visual cortex. Cats must be fed
Vitamin A already in the form of
retinal palmitate as they lack the
enzyme to convert beta carotene
to Vitamin A.
A lack of Vitamin A in puppies
relates directly to poor vision, fur
loss and low growth rates.

JOINTS AND BONES

Omega 3 Fatty Acids can help
reduce inflammation associated
with arthritis and other
inflammatory diseases.
Vitamin D regulates calcium
absorption and promotes normal
bone calcification. It is
necessary for bone and joint
formation.

CANCER

Omega-3 fatty acids have been
shown to slow the development
and metastasis certain cancers.
Omega-6 fatty acids, on the
other hand, have been shown to
stimulate tumor development.
Vitamin E is a powerful
antioxidant that reduces free
radicals (which may cause
cancer), plays a role in the
formation of cell membranes and
protects various hormones
against oxidation.

Commercially prepared pet foods and the natural diets of wild carnivores differ greatly in Omega 6: Omega 3 ratios. The wild canine/feline diet which is composed primarily of birds and small animals eaten whole is high in Omega 3 and low in Omega 6.

Commercial pet food is the reverse. Much of the food contains cereal grains which are high in Omega 6 and low in Omega 3. This unnatural ratio of Omega 6: Omega 3 impacts the health of pets in ways that veterinarians and nutritionist just beginning to understand.

AUUM PETS

Fashioned after the original diet of the Canadian Eskimo Dog.

These special sled dogs led Admiral Perry to discover the North Pole in 28 days. They are capable of pulling 13 hours a day in -40C temperatures. Because their natural raw meat diet is enriched with seal blubber they consume massive amounts of Omega 3 and associated fat soluble vitamins A, D and E. Their extreme endurance, their staggering strength, and the 3 beautiful layers of rich fur, are testaments to a diet rich in mammalian Omega 3.

Naturally
Canadian

AUUM Omega 3 for PETS

AUUM PETS is a Natural Supplement for dogs and cats.

This unique supplement created by the leader in human OMEGA 3 formulations has been especially designed for dogs and cats. Not only does it provide the necessary balanced

OMEGA 6: OMEGA 3 ratio, but also the vitally important fat soluble Vitamins A, D and E. It is completely free of fish oil and is a critically important addition to your pet's diet.
